PROFESSIONAL SUMMARY

Software Development Engineer (MTS) with 1+ year of experience, focused on building reliable backend systems and full-stack applications. Comfortable owning features end-to-end—from problem understanding to production deployment—and continuously improving system efficiency, scalability, and maintainability

EXPERIENCE

Software Development Engineer (MTS), Pixart Technologies

Sep. 2024 – Present

Automation & Internal Tools

- Designed and implemented a Python-based automation pipeline with JSON state management, OpenCV/FFmpeg video processing, and batch execution, reducing manual effort by ~80% and improving processing time from 30–40 minutes to under 5 minutes per client.
- Developed a modular orchestration system using Tkinter with automated input/output workflows and Drive integration, enabling scalable, fault-tolerant processing and delivery for 100+ client video jobs with minimal human intervention.

Monthly Planner

End-to-End Ownership

- Designed and built a full-stack Monthly Planner application to enable a smooth, day-wise learning workflow, reducing manual lesson planning effort by ~50%.
- Implemented a Python-based letter tracing engine using k-NN graph construction and Dijkstra's algorithm, enabling accurate stroke generation and improving consistency in interactive letter learning.
- Developed a React frontend to organize content class-month-day wise, dynamically rendering lessons with videos, documents, and animated letter tracing to improve learner engagement.
- Deployed the application on a Linux VPS using Nginx and PM2, supporting production demos and real usage with stable performance and minimal operational overhead.

Book Selector

Role-Based Full-Stack Application

- Implemented role-based dashboards for users and administrators, enabling controlled access to features and data based on user roles.
- Built frontend and backend components for role-based functionality using React and Flask, with Firebase for authentication and data management.

PROJECTS

Smart Device Recommendation Engine

Full-Stack Web Application

- Built a recommendation system to suggest smart devices based on user preferences and requirements, enabling personalized and informed device selection.
Made using: Django, RESTful APIs, MongoDB, HTML, CSS, Bootstrap, JavaScript

Weather Dashboard Application

Web Application

- Developed a web application to fetch and display real-time weather information for user-selected locations using a public weather API.
Made using: HTML, CSS, JavaScript, Weather API

TECHNICAL SKILLS

- Programming:** Python, JavaScript
- Web Development:** HTML, CSS, React, Flask, Django, Node.js
- Databases:** MySQL, Firebase
- Tools & Platforms:** Linux, Git, Nginx, PM2
- Computer Science:** Data Structures and Algorithms, OOP Concepts

CERTIFICATIONS

- Python Full Stack Developer — Destination CodeGnan
 - Machine Learning Internship — D3 Solutions
-
